

CARPENTRY

OPENABLE WINDOW IN ROOF

This fixture is realized with framework in rolled wood externally dressed again with outlined in aluminum; the glasses are safety with double isolation. To allow the opening of the window they are mails frictions and zippers that allow the opening of the fixture.

Besides, through the use of a bar of maneuver it posts on the inside leaf in the superior part, it is possible to open the fixture to allow the natural ventilation. Besides, through the same, the passage of the air is possible without the necessity to open the window because constituted by a filter to prevent the entry of dust and from the bugs.

The window can be open up to describe an angle of ventilation equal to 5° ; such value is preset. Besides, an opening of 170° can be planned to facilitate the cleaning of the external glass.
