

SLOPED ROOFS

SLOPED ROOF WITH MIXED CEMENT TILE

As sloped elements have been used light trusses made of galvanized steel profiles.

Over the trusses are placed fibrocement corrugated roof plates with polyurethane foam like insulation and vapor barrier into it. Over the plates is a galvanized steel frame “omega”, and over it are placed mixed cement tiles as coating.

The finishing in the room under the roof, are made of plasterboard nailed to another steel frame “omega”.
